

1.5 DOUBLE WALL PIPES

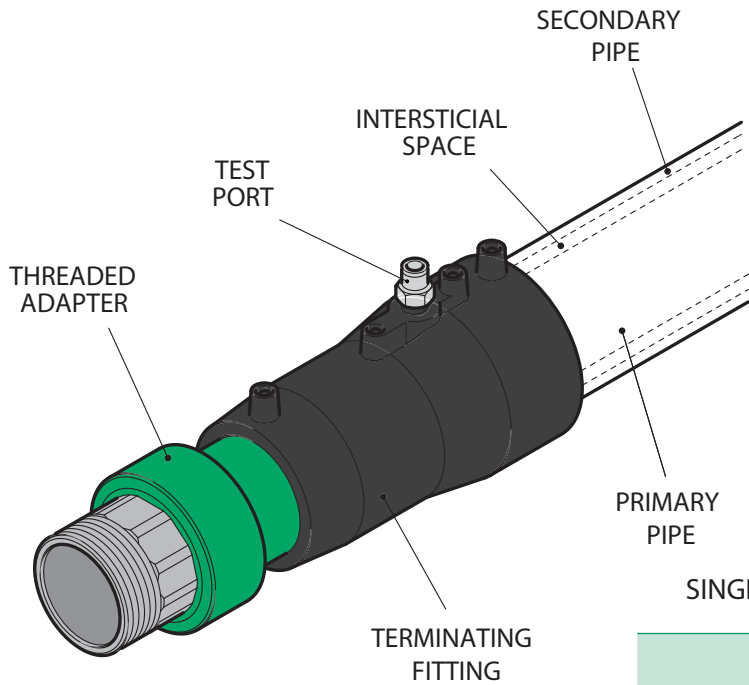

SMARTFLEX double wall pipes for the transport of fuels, alcohols, alcohol-gasoline mixtures, and bio fuels.

A DOUBLE WALL pipe is a primary pipe encapsulated by a secondary pipe.

In SMARTFLEX double wall pipes, the secondary pipe is not just a containment barrier, it is a real high-density polyethylene pipe capable of sustaining the pressure or pressure differential. It also features an automated monitoring system. This external pipe is also available with an inner barrier, as requested by standards (e.g. UL) and by customers' specific requests.

The advantages are as follows:

- Excellent chemical resistance to alcohols, solvents, saline, acid and alkaline solutions
- High resistance to long-term pressure
